SUMMARY

Java Full Stack Developer with 2+ years building multi-tenant enterprise platforms with **Java, Spring Boot, Spring Security, JPA/Hibernate, PostgreSQL, and Angular 17**. Delivered 160+ tickets across 4 products, including greenfield inventory, billing, and SLA penalty modules. Also builds and runs two production platforms as a freelancer.

WORK EXPERIENCE

Java Full Stack Developer | CMS Computers India Private Limited | Mumbai

Aug 2024 – Present

Incident, CMMS, Contract & License products | Spring Boot, Spring Security, JPA, PostgreSQL, Flyway, Angular 17, WebSocket

- Delivered **160+ tickets (65+ features, 75+ bug fixes)** across 4 products with **320+ commits** to the Spring Boot and Angular codebases; manage Git branches and releases and take part in peer code reviews.
- Built a greenfield **Inventory Management** module (~10K LOC): 8 stock-transaction workflows on an **append-only ledger**, **SELECT FOR UPDATE** locking and **UUID idempotency keys** against race conditions and duplicate posts, backed by 5 tables and 8 indexes.
- Designed a configurable **SLA penalty engine** for contract tickets: per-contract working calendars, rate, percentage, and flat charge rules with caps, a **5-state lifecycle**, permission-gated waivers, and a full audit trail feeding into invoices.
- **Owned Billing & Invoicing**: work-order-to-payment pipeline with itemized tax, a Draft → Approved → Sent → Paid lifecycle with configurable **multi-level approvals**, consolidated per-contract invoices, and run tracking for the cron-based billing scheduler.
- Rebuilt the operational **dashboard** as a drag-and-drop grid of **11 role-filtered widgets** with per-user layouts stored as **JSONB**, **WebSocket** live updates, and ECharts/Leaflet heat maps, cutting the component from ~1,780 to ~500 lines.
- **Reduced API response times by ~30%** by eliminating Hibernate **N+1 queries**, indexing, and paginating; cut heat-map entity loading from ~100K to ~500 rows per tenant by pushing filters into the database.
- Enforced **multi-tenant security** with **Spring Security** and **JWT**: endpoint-level permissions, role-based access, and a JWT-driven scope resolver applying customer and service-provider **JPA Criteria** filters across modules.
- Built the contract workflow (assessment → estimate → work order → completion report) with approvals and BOQ tracking; authored **9+ Flyway migrations**, async **JasperReports** PDF/Excel exports, and a license-management server (Spring Boot, Vue.js).

FREELANCE PROJECTS

Fifty Villagers – Education Platform

fiftyvillagers.org

- Live platform (Node.js, PostgreSQL, React) with **RBAC**, **JWT refresh tokens**, and **HMAC-verified Razorpay webhooks** backed by a tested payment state machine; 17+ migrations, deployed with **Docker**, **Nginx**, and **GitHub Actions**.

Kalam Ashram – Mock Test & Payments Platform

kalamashram.org

- **NestJS + Next.js 15** monorepo with OTP login, a **Redis-backed** test engine, and **idempotent Razorpay payments** with an entitlement ledger; unit tests gate every deploy in GitHub Actions.

Energy Meter Configuration Portal

Spring Boot · Keycloak · Next.js

- **Spring Boot REST APIs** for meter configuration exchange with **Keycloak SSO** and role-based authentication over OAuth 2.0.

TECHNICAL SKILLS

Languages: Java, SQL, TypeScript, JavaScript (ES6+), Python

Backend: Spring Boot, Spring Security, Spring Data JPA, Hibernate, JPA Criteria API, REST APIs, WebSocket (STOMP), JWT, OAuth 2.0, Keycloak, Flyway, JasperReports, Apache POI, Maven, OpenAPI/Swagger

Frontend: Angular 17, Angular Material, PrimeNG, RxJS, ECharts, Leaflet, Vue.js, React.js, Next.js

Databases: PostgreSQL (JSONB, indexing, row locking, query tuning), MySQL, MongoDB, Redis

DevOps & Tools: Docker, GitHub Actions, Jenkins, Nginx, Git, Linux, Postman

EDUCATION

B.Tech. in Electrical & Computer Engineering | Amrita Vishwa Vidyapeetham, Coimbatore

2020 – 2024 | CGPA: 7.86 / 10

CERTIFICATIONS

IIT Madras Pravartak: Professional Certificate Programme in AI, ML and Deep Learning (Aug 2025 – 2026)

Coursera: Spring Boot Microservices • **Udemy:** Java Full Stack Development
